Continuation of 11. does NOT place the application in condition for allowance because: In response to Applicant's argument that Figure 19 fails to show that the the common electrode wiring CT and the film AS does not divide the pixel region into two sub-regions, Examiner submits that the lower electrode (CT) does not cover the edge of the pixel region. As shown in Figure 19, a part of the pixel regoin remains above the lower electrode (CT). Even furthermore, the pixel region as broadly interpreted by the Examiner can include the entire region defined by the gate and data lines.
